Createspace, United States, 2013. Paperback. Book Condition: New. 254 x 203 mm. Language: English . Brand New Book ***** Print on Demand *****.A virus is a small infectious agent that replicates within living cells of organisms. Viruses infect all types of organisms, from animals and plants to bacteria and archaea. Today, around 5,000 viruses have been reported in detail, although there are potentially millions. Viruses are found in almost every ecosystem on Earth and are the most abundant type of biological entity. The study of viruses is known as virology, a sub-speciality of microbiology. Virology has two volumes. Volume 1 mainly discusses the latest research related to Human Immunodeficiency Virus (HIV). Chapter 1 explores HIV epidemics throughout the world, examining transitions from injected related transmission to heterosexual transmission of the HIV virus. The authors explain factors that influence the transitions in countries with high prevalence HIV infection among their injecting drug use populations. Chapter 2 discusses the association between HIV and Hodgkin lymphoma (HL). In the current post-combination antiretroviral therapy era, HL ranks among the most frequent non-AIDS defining cancers (NADCs) and is an emerging and challenging entity in sub-Saharan Africa. Chapter 3 seeks to outline some PMTCT and child...
